Assignment 2 Report

Yutian Jing 260680087

1) Synchronization tools we've used in this assignment is the semaphores. We need to usesemaphores to ensure theres only 1 critical section of any thread running exclusively. If nosynchronization tools are used, race conditions would occur and some incremental or decrementalinformations will lost due to race conditions between threads.

2) I included the print results in a compressed folder containing each individual runs of the test combination since its too long to include them in this report. Please check my submission folder. Thank you!
